

ALGORITHM

Step-by-step instructions a computer follows to solve a problem.

Like a PS4 game: press X, and the character checks the ground, jumps, and lands.

BUG

A mistake in code that makes a program do something wrong.

Named after a real moth that got stuck in an old computer!

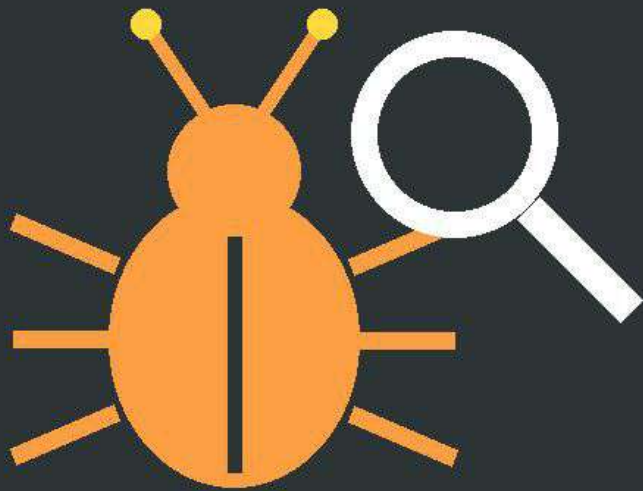

DATABASE

A super-organized filing system
where computers keep
information.

*Like a giant library where every book
has its exact shelf.*

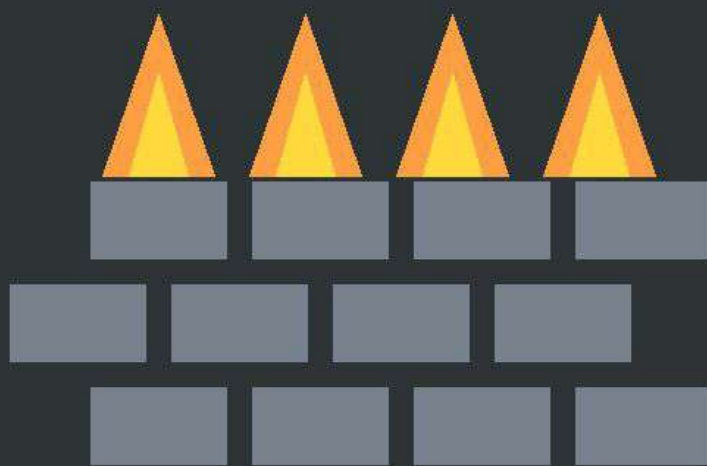

DEBUGGING

Finding and fixing mistakes in code, like a detective hunting clues.

Like finding the one puzzle piece that was upside down the whole time.

FIREWALL

A digital wall that blocks bad traffic from reaching your computer.

Like a castle wall for your computer.

OPEN SOURCE

Code that anyone can look at,
use, and help make better, for
free.

*Like sharing your Lego instructions so
everyone can build and add their own
pieces.*
